Meeting Minutes

1. Meeting Details

Meeting Title: Project Debrief and Client Requirements Review

Date: 12 August 2026

Time: 18:30

Duration: Approximately 1 hour 40 minutes

Location / Platform: Microsoft Teams

Chairperson: Amahle Ndlovu

Minute Taker: Ayabonga Nzuza

2. Attendees

Present : Ayabonga Nzuza, Nonjabulo Mathenjwa, Dr Busi Ndlovu, Nomsa Mothapo, Sandiswa Memela, Siyabonga Ndlovu Amahle, Zanenhlanhla Khonjwayo , Siyabonga Ndlangisa

Apologies: None recorded.

3. Agenda Items

1. Introduction and presentation of team responsibilities.
2. Functional and non-functional requirements.
3. Data schema and system structure.
4. Website maintenance and technical support.
5. System architecture and development collaboration.
6. Running costs, domain registration, and website users.

7. SisterLove South Africa's organisational identity and independence.
8. November project timelines and critical dates.
9. Website content, images, mission statement, and demonstration.
10. Documentation, variables, and presentation of the proposed final product.
11. Next meeting and involvement of the organisation's president.

4. Discussion & Decisions

Agenda Item 1: Introduction and Team Responsibilities

The meeting began with **Ayabonga Nzuza** providing an introduction and outlining the purpose of the meeting. The discussion focused on reviewing the progress of the project, clarifying the responsibilities of individual team members, and addressing questions raised by the client regarding the proposed website and system.

Each team member was given an opportunity to explain their assigned section and how their work contributes to the overall project. The importance of understanding how the individual components fit together was emphasised, with the project being compared to **pieces of a puzzle that need to come together to form the final product**.

It was agreed that team members should be able to clearly explain their individual contributions and demonstrate how their work supports the overall requirements of the client.

Agenda Item 2: Functional and Non-Functional Requirements

Nonjabulo presented and explained the **functional and non-functional requirements** of the proposed system.

The discussion included further clarification of the requirements relating to **non-communicable diseases**, ensuring that the information included in the system accurately

reflects the organisation's objectives and the information that needs to be communicated to website users.

The client representatives also requested that the project documentation be sent **two to three days before meetings** wherever possible. This would allow the organisation sufficient time to review the documents, prepare questions, and provide meaningful feedback during meetings.

An explanation was also provided regarding the **numbering system used throughout the documentation** so that the client could understand how the different requirements and sections were organised.

It was agreed that documentation should be shared sufficiently in advance of future meetings to allow proper review.

Agenda Item 3: Data Schema Explanation and Demonstration

Sandiswa presented and explained the proposed **data schema**, including how information would be structured within the system.

The purpose of the data schema and its relationship to the rest of the system were discussed. The presentation helped demonstrate how the different pieces of information would be organised and how the underlying structure supports the website and its functionality.

The importance of ensuring that the data structure is understandable, maintainable, and aligned with the client's requirements was highlighted.

Agenda Item 4: Website Maintenance and Technical Support

A significant discussion took place regarding responsibility for maintaining the website once the project has been completed and launched.

A key question raised was:

Once the website is operational, who will be responsible for updating information and uploading new content?

The client wanted clarity on whether the organisation would require a dedicated IT specialist to manage the website.

It was clarified that **the organisation should not necessarily require an IT expert for ordinary website updates**. The system should be designed to allow appropriate users to manage routine content and information without requiring advanced technical knowledge.

However, the possibility of technical problems was also discussed. If a significant technical issue occurs or the website/system breaks, an **IT specialist or developer may be required to provide technical support**.

The discussion therefore highlighted the importance of distinguishing between:

- Routine content management and updates.
- Technical maintenance.
- Troubleshooting and system repairs.
- Long-term technical support.

The client also asked questions regarding **how long the system could continue operating and what would be required to keep it running**.

The issue of ongoing technical support was identified as an important consideration for the final project.

Agenda Item 5: Interoperability and System Architecture

Sandiswa responded to questions concerning **interoperability**, explaining how the system could work with or interact with other relevant systems or technologies.

Amahle then presented the architecture section of the project. She explained how the different components of the system would be structured and how the various parts would connect to form the complete solution.

The discussion reinforced the importance of the team understanding the relationship between the different technical components rather than treating each section as an isolated piece of work.

The architecture should therefore clearly communicate how the different components work together as one system.

Agenda Item 6: Development Collaboration and GitHub

Zanenhlanhla presented her section concerning **GitHub and collaboration during development**.

The team discussed how GitHub is being used to manage the development work and allow the different members to collaborate on the project.

Several questions were raised regarding Zane's section. It was clarified that the final product and documentation should demonstrate what the developers have actually completed and should allow the team to explain their individual contributions to the lecturer.

The importance of being able to demonstrate the development process, rather than simply presenting a final product, was emphasised.

The team was reminded that the final system consists of multiple contributions that need to work together effectively.

Agenda Item 7: Running Costs and Financial Considerations

The meeting included an extensive discussion regarding the **running costs associated with the website**.

Nomsa and Busi raised concerns about the financial implications of maintaining the website after development has been completed.

The team needed to provide clearer information regarding:

- What costs are associated with operating the website.
- Where the money for these services would be paid.
- Who the organisation would need to pay.
- Which services would require recurring payments.
- Whether there would be costs associated with maintaining the website in the long term.
- How the number and type of website users or visitors may affect running costs.

Nonjabulo also contributed to the discussion regarding running costs and the need to clearly document the financial implications of the proposed solution.

The team agreed that these costs need to be clearly explained in the project documentation so that the organisation understands its potential long-term financial obligations.

Agenda Item 8: Domain Registration

The team discussed the requirements for obtaining and maintaining a **domain name** for the website.

GoDaddy was mentioned as one possible domain registration provider.

The team needs to investigate the appropriate domain name and registration arrangements and ensure that the selected domain reflects the organisation's South African identity.

The domain-related costs should also be considered as part of the overall running-cost analysis.

Agenda Item 9: SisterLove South Africa Identity

An important discussion took place concerning the organisation's official naming and identity.

The team was advised that the organisation should **not be referred to simply as SisterLove International or presented as though it were the United States organisation**.

The preferred naming structure discussed was to use the organisation's **full registered name**, followed by its trading name as **SisterLove South Africa**, with **SLiSA** used in brackets where appropriate.

The client emphasised the importance of establishing a **clear South African identity** for the organisation.

It was also clarified that there should be **no SisterLove South Africa launch associated with the United States government** and that the South African organisation should maintain as much independence as possible.

The website should therefore communicate that the South African organisation is its own organisation and should not create confusion regarding its relationship with the United States office.

The team also agreed that website imagery should be appropriate to the South African context. Where photographs or visual material are used, the team should prioritise **South African-based imagery** to strengthen the local identity of the organisation.

Agenda Item 10: Website Users, Accessibility and System Usage

The meeting included discussion about the different types of users who may interact with the website.

The team was asked to provide greater clarity regarding **who the users and visitors of the website will be**, particularly in relation to the running costs and system requirements.

The discussion also considered how users would interact with the system, including aspects such as completing forms and entering information.

The team needs to ensure that the website is understandable and accessible to its intended users and that any required user interaction is clearly explained.

Agenda Item 11: November Timeline and Travel Concerns

The team discussed possible **critical dates during November** and how these dates may affect the project and the availability of team members.

There were concerns regarding travelling during November, particularly following **Amahle's discussion of her section**.

At this stage, the exact November dates had **not yet been confirmed**. It was agreed that the relevant dates would be communicated via email as soon as they are finalised.

The team should therefore remain flexible until the final November schedule has been confirmed.

Agenda Item 12: Website Demonstration and Content

The team discussed the current status of the website demonstration.

The **demo had not yet been completed** at the time of the meeting. The team indicated that the demonstration would be sent through on **Friday** for review.

The team was also instructed to review the images used on the website and ensure that they appropriately represent **South Africa and the organisation's local identity**.

The **mission statement** also requires further refinement. The wording should be adjusted so that it communicates the organisation's purpose appropriately without being unnecessarily explicit or creating an incorrect impression of the organisation.

Agenda Item 13: Documentation and Presentation to the Organisation

The importance of completing and sharing the project's documentation was discussed.

The team needs to ensure that the relevant **variables, documents, requirements, diagrams, and supporting information** are properly prepared and organised.

The documentation will ultimately be used to demonstrate the team's work and provide the organisation with a clear understanding of the proposed system.

The team agreed that the documentation should be shared by **Friday**.

The purpose of providing the completed documentation is also to ensure that the organisation's president can review and understand the proposed solution.

Agenda Item 14: Team Member Presentations

Siyabonga also explained his assigned section of the project.

The meeting provided an opportunity for the different members to explain their respective contributions and receive questions and feedback.

The team was reminded that every member should understand their own section well enough to explain it clearly during future presentations and assessments.

The final product should demonstrate the work completed by the developers while also providing sufficient evidence for the lecturer to understand each member's contribution.

Agenda Item 15: Next Meeting and Involvement of the President

The possibility of inviting the **president of the organisation** to the next meeting was discussed.

It was suggested that the president should be involved in future discussions, particularly where important organisational decisions need to be made.

The exact arrangements and whether the president will attend the next meeting are **still to be confirmed (TBC)**.

The team will communicate the relevant arrangements once confirmation has been received.

5. Action Items

1. **Ayabonga** will continue preparing and recording project meeting minutes and updates.
2. **Nonjabulo will** ensure that the functional and non-functional requirements, including requirements relating to non-communicable diseases, are clearly documented.
3. **Sandiswa** will ensure that the data schema and its relationship to the wider system are clearly documented for presentation.
4. **Amahle** will continue developing and documenting the system architecture and explain how the different components connect.
5. **Zanenhlanhla** will continue documenting the GitHub collaboration and development process and ensure that the team's development contributions can be demonstrated.
6. The team will investigate **website maintenance and technical support requirements**, including who will be responsible for routine updates and what support will be required if technical problems occur.
7. The team will investigate the **running costs of the website**, including hosting, domain registration, maintenance, and any other recurring costs.
8. The team will provide clarity on **who pays for each service** and where the organisation's money would be allocated.
9. The team will investigate suitable **domain registration options**, including GoDaddy, and include the associated costs in the documentation.
10. The team will ensure that the organisation is consistently referred to using the correct **South African organisational identity and naming convention**.
11. The team will ensure that the website does not incorrectly represent SisterLove South Africa as the United States organisation or imply an association with the US government.
12. The team will review website imagery and replace inappropriate images with **South African-based imagery** where necessary.
13. The team will review and refine the **mission statement** to ensure that the wording accurately represents the organisation without being unnecessarily explicit.

14. The team will provide the outstanding **website demonstration on Friday**.
15. The team will share the relevant **project documentation by Friday** so that it can be reviewed by the organisation.
16. The team will provide future meeting documents **two to three days before meetings** where possible, allowing the client sufficient time to review the material.
17. The team will confirm the **critical November dates** as soon as they become available and communicate them via email.
18. The team will investigate the expected **website users and visitors** and consider how these users may affect the running and maintenance costs.
19. The team will prepare the required documents and supporting material so that they can be presented to the **president of the organisation**.
20. The team will confirm whether the **president will attend the next meeting** and communicate the arrangements once confirmed.

6. Next Meeting

Date: [To Be Confirmed]

Time: [To Be Confirmed]

Location / Platform: [To Be Confirmed]

Proposed Attendee: President of the organisation, subject to confirmation.

Proposed Focus for Next Meeting

- Review the website demonstration.
- Review the updated project documentation.
- Discuss feedback from the organisation.
- Confirm running costs and domain requirements.
- Confirm website maintenance and technical support arrangements.
- Review the South African organisational identity and website content.
- Discuss November project dates.
- Address outstanding questions and decisions requiring organisational approval.
- Confirm any further changes required before finalisation of the project.

7. Meeting Summary

The meeting lasted approximately **1 hour and 40 minutes**, remaining under two hours. The discussion covered both the technical and organisational aspects of the project in considerable detail.

The major outcomes were the need for greater clarity around **website maintenance, technical support, running costs, domain registration, users, organisational identity, documentation, and the November timeline**.

The team also received important feedback regarding the presentation of SisterLove South Africa as an **independent South African organisation**, rather than creating confusion with the United States office.

The immediate priorities are to **complete and send the website demonstration and project documentation by Friday**, refine the website's content and imagery, investigate the ongoing costs of the solution, and prepare the necessary information for presentation to the organisation's leadership.
